Tolent

Pharmaceutical & Petrochemical

A unique formula for construction capability

The construction of modern pharmaceutical processing plants calls upon a vast range of specialist skills.

Long term efficiency and precise processing capability are paramount to ensure profitability, but the overriding concern for all involved has to be absolute safety for workers, residents in the surrounding locality and the environment in general.

Projects range from modest values to multi million pound undertakings, either to the client's design and specification or on a design and build basis.
